

Alternative Performance Measures - APMs

Sparebanken Møre has prepared Alternative Performance Measures (APMs) in accordance with ESMA's guidelines for APMs. We use APMs in our reports to provide additional information to the accounts and also as important financial performance figures for the management. The APMs do not intend to be a substitute for accounting figures prepared in accordance with IFRS nor should they be given more emphasis. The key figures are not defined under IFRS or any other legislation and are not necessarily directly comparable with similar key figures in other banks or companies. All figures are stated in NOK million unless stated otherwise.

Return on equity	
Definition	Profit/loss for the financial year as a percentage of average equity for the year (proposed dividend in line with the Group's dividend policy is deducted). Additional Tier 1 capital (AT1) classified as equity is excluded from this calculation, both in profit/loss and in equity.
Justification	Return on equity is one of Sparebanken Møre's most important financial performance figures. It provides relevant information about the profitability of the Group by measuring the profitability of the operation in relation to the invested capital. The profit/loss is adjusted for interest on AT1-capital, which pursuant to IFRS, is classified as equity, but in this context more naturally is classified as liability since the AT1-capital bears interest and does not entitle to dividend payments.
Cost income ratio	
Definition	Total operating expenses as a percentage of total income.
Justification	This key figure provides information about the relation between income and expenses and is a useful performance indicator for evaluating the cost-efficiency of the Group.
Losses as a percentage of loans and guarantees	
Definition	«Impairment on loans, guarantees etc.» as a percentage of «Gross loans to and receivables from customers and guarantees» at the beginning of the accounting period (annualised).
Justification	This key figure specifies recognised impairments in relation to gross lending and guarantees and gives relevant information about the bank's losses in relation to lending and guarantee volumes. This key figure is considered to be more suitable as a comparison figure against other banks than the impairments itself since this figure is viewed in context of the lending and guarantee volume.
Deposit-to-loan ratio	
Definition	«Deposit from customers» as a percentage of «Gross loans to and receivables from customers».
Justification	The deposit-to-loan ratio provides important information about how the Group finances its operations. Receivables from customers represent an important share of the financing of the Group's lending, and this key figure provides important information about the Group's dependence on market funding.
Lending growth as a percentage	
Definition	The period's change in «Lending to and receivables from customers» as a percentage of «Lending to and receivables from customers» over the last 12 months.
Justification	This key figure provides information about the activity and growth in the bank's lending.
Deposit growth as a percentage	
Definition	The period's change in «Receivables from customers» as a percentage of «Receivables from customers» over the last 12 months.
Justification	This key figure provides information about the activity and growth in deposits, which is an important part of the financing of the Group's lending.
Book value per equity certificate	
Definition	The total equity belonging to the owners of the bank's equity certificates (the equity certificate capital, the share premium fund, the dividend equalisation fund and the equity certificate holders' share of other equity, including proposed dividends) divided by the number of equity certificates issued.
Justification	This key figure provides information about the value of the book equity per equity certificate. This allows the reader to assess the market price of the equity certificate. The key figure is calculated as equity certificate holders' share of the equity at the end of the period, divided by the number of equity certificates.
Price/book value (P/B)	
Definition	Market price on the bank's equity certificates (MORG) divided by the book value per equity certificate for the Group.
Justification	This key figure provides information about the book value per equity certificate compared to the market price at a certain time. This allows the reader to assess the market price of the equity certificate.
